

Thanet Year List 2009

The area covered by this species list is the landmass that lays within the boundary of the Rivers Wantsum & Stour. Any species that has been seen on, over, or from, this area are able to be included – our only criteria is that they must have been reported on Planetthanet.org. The western boundary is formed by the R.Wantsum as it flows south from Coldharbour Lagoon, just to the west of Minnis Bay, to the River Stour where the Sevenscore Dike (yes that is the correct spelling!) joins at Cuts End, just south of Sarre. The River Stour then provides the bulk of the southern boundary, with the channel & sluice besides the Richborough Power Station being the limit towards Sandwich. The southern edge of Pegwell Bay, and the mouth of the Stour, being the obvious and historical limit of our recording area. All records are taken at face value and have no formal status within the ornithological records for Kent, unless submitted to the relevant authorities by the individual contributors.
